# 1 YOUR ANTIDOTE—ONLINE!

Antidote Web offers Antidote’s three renowned tools: the corrector, the dictionaries and the guides. The main difference is that these tools will open in a Web browser instead of in Antidote 10’s usual windows.

## 1. Accessing Antidote Web

Type [antidote.app](https://antidote.app) in your browser and log in using your ID (your email address) and your password.

## 2. The Corrector

You will find the corrector you know and love. The sections below will discuss the different ways in which a text can be submitted to the corrector.

## 3. The Dictionaries

The dictionaries contain rich content with powerful search engines. For more information, please see [The Dictionaries](#) section of Antidote 10’s User Guide.

## 4. The Guides

The language guides contain detailed articles covering all aspects of language. For more information, please see [The Language Guides](#) section of Antidote 10's User Guide.

#### 5. Your Favourites

The favourites allow you to bring together your top dictionary and guide entries. For more information, please see the [Favourites](#) section of Antidote 10's User Guide.

#### 6. Your Personal Dictionaries

Add words to your personal dictionary to assist the corrector. For more information, please see the [Personal Dictionaries](#) section of Antidote 10's User Guide.

#### 7. Your Settings

The settings allow you to adjust the finer points of the correction process to your needs. For more information, please see the [Settings](#) section of Antidote 10's User Guide.

## 2 CORRECTING A TEXT IN ANTIDOTE WEB

On a regular screen    On a small screen

The screenshot displays the Antidote Web interface for text correction. At the top, there are two buttons: "On a regular screen" and "On a small screen". Below these is a toolbar with various icons, including a copy icon (6). The main interface is divided into three sections:

- Left Panel:** A vertical navigation menu with icons for document, correction, revision, and inspection. A "Document Antidote" header is visible. Under "Correction" (4), there are three categories: Language (49), Typography (25), and Style (45). Under "Revision", there are Pragmatics, Semantics, and Logic. Under "Inspection", there are National varieties, Categories, Phrases, Syntactic functions, and Conjugation.
- Central Panel:** The main text editor. It shows a text snippet: "Annual Competition Of the Richmond Neighborhood Garden Association". Below this, a paragraph of text is displayed with several underlined words. A tooltip (5) is shown for the word "summarised", explaining that in Canadian English, it is spelled "summarized".
- Right Panel:** A list of errors (39) (3). It shows a list of errors with suggestions for corrections. For example, "Of" is corrected to "of", "Neighborhood" to "Neighbour...", "an orticultural" to "a horticultural", "member" to "members", "annual" to "Redundancy", "taked" to "took", "at" to "on", "Tuesday" to "Thursday", "23nd" to "23", "that as many ..." to "as many peo...", "beautifuler" to "more beautiful", "grow" to "growing", "summarised" to "summarized", "these" to "this", "associationme..." to "Association ...", "they're" to "their", "on on" to "on", "guardens" to "gardens", "edibles" to "edible", "over-all" to "overall", and "was" to "were".

1. In the vertical panel on the left-hand side, click the corrector icon.
1. Type or paste your text in the central panel. Antidote Web will analyze it instantly.
1. The list of detections in the panel on the right-hand side provides you with an overview of the corrector's analysis. Click on a detection to find it in the text.
1. The detection prisms are located in the panel on the left-hand side. Antidote shows you the detections for *Language* first. You can also see the detections for *Typography* and *Style*.
1. When you click on a detection, a tooltip will appear with the relevant explanations. For more information, please see [The Corrector](#) section of Antidote 10's User Guide.
1. Once you have finished correcting your text, click on the toolbar's copy icon at the top of the screen. You can now paste your text in another application.

### 3 CORRECTING A TEXT FROM ANOTHER BROWSER WINDOW

To correct a text from another browser window, you will first need to install the necessary connector. Antidote Web will give you the option to do so when you log in for the first time.

## Connectors

Install the connector for your browser to be able to access Antidote from whatever web site you are visiting.

No longer show

[Later](#) [Install the connector](#)

Click **Install the connector** and follow the instructions. (Note: There is no connector for iOS or Android.) Once the connector is installed, Antidote's flask will appear in your browser's icon bar. All you need to do is to click the flask to correct the text you have selected in your browser.

## 4 CORRECTING A TEXT FROM ANOTHER APPLICATION

Antidote Web can also correct a text written in a local application other than your browser. It can be integrated with Word, PowerPoint and Excel. (See [Antidote 10's compatibility](#).)

To run the corrector from such an application, you will need to get the necessary connector with the help of the Connectix tool. It can be installed by following the steps below.

### Step 1

In Antidote Web, click on your avatar in the top right-hand corner. Select **Connectors**, and then click **Download Connectix**.

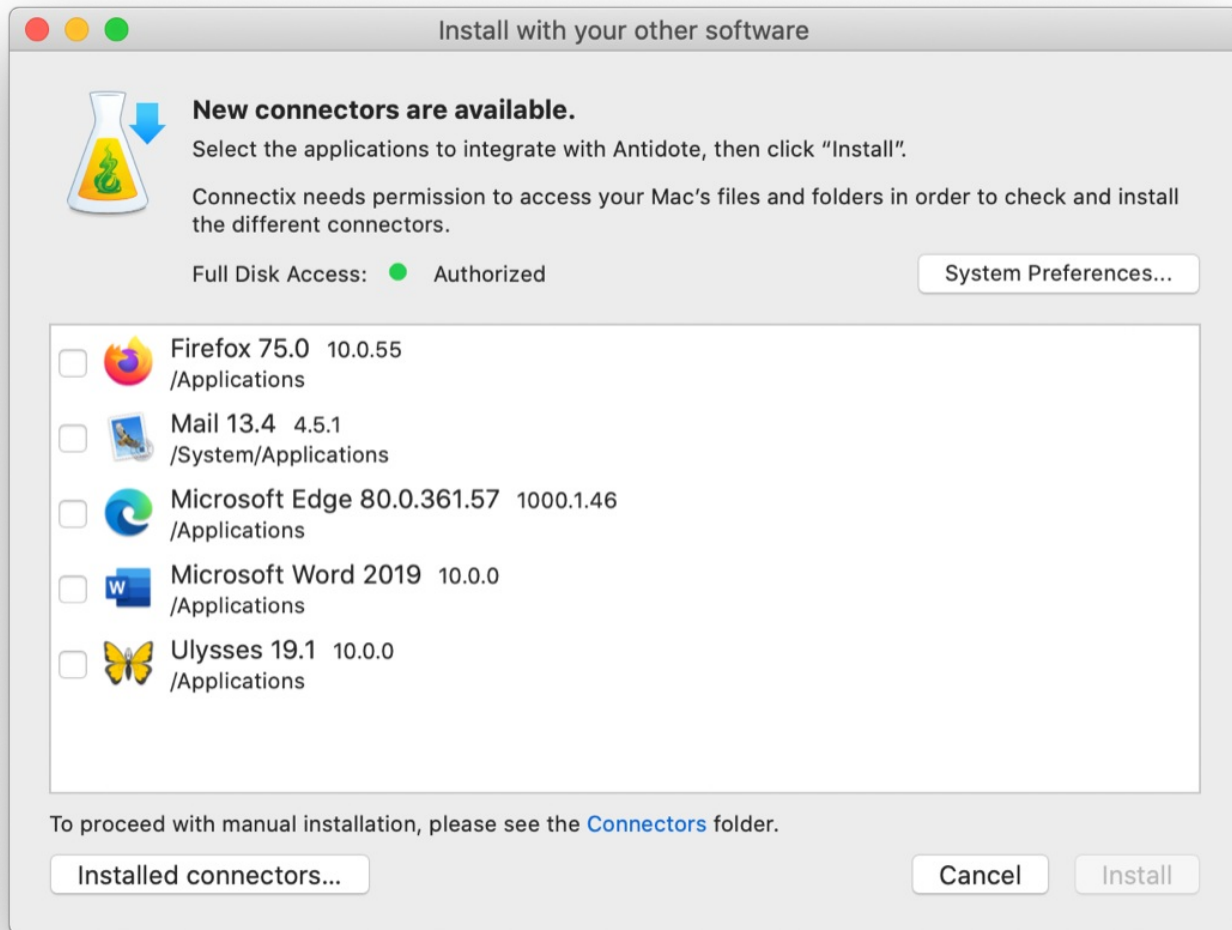

### Step 2

Double click on the downloaded folder. It can most likely be found in the **Downloads** folder.

- In Windows, a **Connectix** folder will be created on your desktop. Connectix's installer is located in this folder. All you will need to do is run it.
- On macOS, a disk image with Antidote's flask will be created. Connectix's installer is located in this folder. All you will need to do is run it.

### Step 3

Select the applications from which you would like to use Antidote Web.

The way in which Antidote Web is run varies between applications and operating systems. For more information, please see the [Using With Your Other Software](#) section of Antidote 10's User Guide.

Unlike Antidote 10, a local application, Antidote Web does not include the *Anti-Oops!* technology, which is used to automatically check emails before they are sent.
